

## Chlorine Dioxide and Vitamin-C

G2C Forum user "robtempe" asked a question on 27 September 2014 regarding CLO<sub>2</sub> and Vitamin-C.

[g2cforum.org/index.php/list/general-discussion/28974-vitamine-c](http://g2cforum.org/index.php/list/general-discussion/28974-vitamine-c)

*"Was there some testing done to prove vitamin c or other antioxidants including herbs negate the effects of mms or is it just from anecdotal evidence? I read so much conflicting information about mms I am not sure what's what."*

I decided to run a simple test to find the answer to the question. Added 3ml of CDH (McRae-Lackney recipe) to 120ml of distilled water and using LaMotte CLO<sub>2</sub> test strips measured about 75ppm CLO<sub>2</sub> concentration.

Then, 15ml (1 Tbs) of homemade LET Vitamin-C was added and this time the CLO<sub>2</sub> concentration measured zero. No detectable CLO<sub>2</sub>.

For some reason the camera does not show the intensity of the CLO<sub>2</sub> yellow/green color that I saw with my eyes in the first (left) photo. Nor is the solution in the left photo cloudy as the camera shows.
