

Chlorine Dioxide and Vitamin-C

G2C Forum user "robtempe" asked a question on 27 September 2014 regarding CLO₂ and Vitamin-C.

g2cforum.org/index.php/list/general-discussion/28974-vitamine-c

"Was there some testing done to prove vitamin c or other antioxidants including herbs negate the effects of mms or is it just from anecdotal evidence? I read so much conflicting information about mms I am not sure what's what."

I decided to run a simple test to find the answer to the question. Added 3ml of CDH (McRae-Lackney recipe) to 120ml of distilled water and using LaMotte CLO₂ test strips measured about 75ppm CLO₂ concentration.

Then, 15ml (1 Tbs) of homemade LET Vitamin-C was added and this time the CLO₂ concentration measured zero. No detectable CLO₂.

For some reason the camera does not show the intensity of the CLO₂ yellow/green color that I saw with my eyes in the first (left) photo. Nor is the solution in the left photo cloudy as the camera shows.
