

Corona Virus Vaccines and CDS*

Lately we have been inundated with bad news about corona virus vaccines. There are many people who are afraid, and not without good reason, because it turns out that all the vaccines from all the manufacturers contain both nano-graphene and magnetite crystals.

The real reason the pharmaceutical industry is adding nano graphene to vaccines is because it provides a higher transfection factor.

One of the substances used in these vaccines is the biomaterial from which diploid cells of aborted fetuses are made.

It is not only an ethical problem, but also a technical one, because there is not enough raw material to produce millions of vaccines. What is the technical solution for this problem?

They use a transfection agent and that is nano-graphene, mostly combined with magnetite crystals because then they can increase the infection rate with little biomaterial, by thousands of times and that means many billions of euros / dollars, because this is first and foremost business and absolute power.

Graphene interferes directly in the biophysical balance of the body, and so the body becomes more susceptible, accumulates huge amounts of ferritin, and at the same time also reinforces the famous magnetic effect on the arm of the inoculated, because the ferritin, instead of being formed by up to 4500 iron atoms, immediately, thanks to the presence of graphene, happens to contain millions of iron atoms per molecule.

What most people and many scientists do not understand is that it is not so much the graphene, but the spike proteins, because graphene is a multiplication factor.

Without viruses, graphene is relatively harmless in this small amount (it's the amount that makes the poison!) because the body, due to its size, over time can excrete it as anything that is not its own or behaves as a noxa in the body.

The spike proteins are the real enemy, because they cause lack of concentration, fatigue, blood clotting and even death, after a while.

But now the good news!!

According to proven cases and corroborated by our COMUSAV doctors, it can even be confirmed that in corona virus vaccinated patients, CDS is absolutely effective.

Vaccinated patients should follow protocol-C for at least 21 days, as well as protocol-K at the place of the injection.

It has been found that patients who were previously magnetic recovered, that symptoms disappeared, and that they no longer had an abnormal magnetic field.

CDS also works on the delta variant and all the other variants, because it is an oxidant, which means that it oxidizes the protein, therefore denaturing it and rendering it harmless.

So we have to focus on spreading information for the solution to the problem, and not just the problem.

All together we can save lives and that is the only thing that matters, because spreading bad messages is not healthy at all.

With CDS we help save lives! We can all do it before it's too late....
